Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: Mountain View Energy Well Name/Number: Red Creek 60 Location: SW SW Section 12 T37N R5W County: Glacier MT; Field (or Wildcat) Red Creek **Air Quality** (possible concerns) Long drilling time: No, 4 to 5 days drilling time. Unusually deep drilling (high horsepower rig): No, single derrick drilling rig to drill to 2900' TD. Possible H2S gas production: Yes, slight low ppm H2S associated with Cut Bank/Madison Oil Production. In/near Class I air quality area: No Class I air quality area. Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211. Mitigation: X Air quality permit (AQB review) __ Gas plants/pipelines available for sour gas Special equipment/procedures requirements Other: Comments: No special concerns – using small rig to drill to 2900' TD. **Water Quality** (possible concerns) Salt/oil based mud: No, freshwater, freshwater mud system and/or air & air mist. High water table: None expected. Surface drainage leads to live water: No, nearest drainage is an unnamed ephemeral tributary drainage to the Red River, about 1/4 of a mile to the northeast from this location. Water well contamination: No, closest water wells are about 3/8 of a mile to the east and west from this location. All other wells are 3/4 of a mile or further away in any direction. Deepest of these water wells are 203' and shallower. This well will drill to 350' with freshwater and or air mist, set 350' of steel surface casing and cement it to surface to protect surface and ground waters. Porous/permeable soils: No, sandy bentonitic soils. Class I stream drainage: No Class I stream drainages. Mitigation: Lined reserve pit

__ Other: _____ Comments: <u>350' of surface casing will be set and cemented to surface</u> adequate to protect freshwater zones. Also, fresh water mud systems to be used.

Off-site disposal of solids/liquids (in approved facility)

X Adequate surface casing

__ Closed mud system

__ Berms/dykes, re-routed drainage

Soils/Vegetation/Land Use

(possible concerns)
Steam crossings: No, no streams will be crossed.
High erosion potential: No, small cut, up to 4.5' and small fill, up to 6.7', required.
Loss of soil productivity: No, location will be restored after drilling, if nonproductive. If
productive unused portion of drillsite will be reclaimed.
Unusually large wellsite: No, 200'X200' location size required.
Damage to improvements: Slight, surface use is grass/alfalfa field.
Conflict with existing land use/values: Slight, surface use grass/alfalfa field.
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
X Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
Other
Comments: Access will be through existing county roads and existing well access
roads. A short access will be built into this location of about 1/16 of a mile. Drilling and
reserve pit will be unlined. Reserve pit and drill pit fluids and cuttings will be allowed to
dry in the pits. Once pits are dry, they will be filled with subsoil and the topsoil will be the
last cover. No special concerns
Health Hazards/Noise
nealth nazarus/noise
(possible concerns)
(possible concerns) Proximity to public facilities/residences: None nearby Closest residence is about 3/8 of

Avoidance (topographic tolerance/exception)
Other agency review (DFWP, federal agencies, DSL)
Screening/fencing of pits, drillsite
Other:
Comments: Private surface lands, grass/alfalfa. No live water. No Grizzly Bear
or Canada Lynx inhabit this area. No concerns.
·
Historical/Cultural/Palcontological
Historical/Cultural/Paleontological (possible concerns)
Proximity to known sites: None identified.
Mitigation
avoidance (topographic tolerance, location exception)
other agency review (SHPO, DSL, federal agencies)
Other:
Comments: Private surface lands, grass/alfalfa field. No concerns.
Threate sando fando, gracoranana nota. No concerno.
Social/Economic
(possible concerns)
Substantial effect on tax base
Create demand for new governmental services
Population increase or relocation
Comments: No concerns. A development oil well in an existing oilfield, Red
Creek Oil Field.
Remarks or Special Concerns for this site
Remarks of Special Concerns for this site
Well is a 2900' Cut Bank and Madison Formation test.
Well is a 2500 Gut Bank and Wadison Formation test.
Summary: Evaluation of Impacts and Cumulative effects
No significant impacts expected in the drilling of this oil well. Some short term surface
impacts will occur.
I conclude that the approval of the subject Notice of Intent to Drill (does/does not)
constitute a major action of state government significantly affecting the quality of the
human environment, and (does/does not) require the preparation of an environmental
impact statement.
